

# What is UTITREX?

We, HRP Infra, have been working with the governmental organisations since a decade and understand the exclusivity and confidentiality of governmental work. Hence, we have developed Utitrex, which is a web based utility management & will provide a unique platform for generating timely and cost effective deliverables.

Utitrex involves GIS services such as geo-referencing, digitization, attribution, theme creation, map preparation, data analysis and report generation, computer aided designing, drafting services, etc. The client's requirements are paid utmost attention and the work is done in close co-ordination with the client

## WEB BASED UTILITY MANAGEMENT

It is a sophisticated approach to handle the utilities using Geospatial technology. It will use a range of modern tools used for geographic mapping and analysis.

Its main aptitude lies in giving solutions from data creation, conversion, analysis, modeling and management.

A combination of unique skill sets with expert realm and functional capabilities is the primary and distinctive differentiator of HRP Infra.

Just a few clicks on the map or a typing of few words can get you all the information with relevant documents, pictures, etc using the asset management system developed by us.
